Managing Editor:

Ilias S. Kotsireas, Wilfrid Laurier University, Department of Physics and Computer Science, Canada

Be part of the journey!

SN Operations Research Forum is a journal that serves the entire Operations Research community, highlighting emerging topics that foster the interaction and exchange among academics and practitioners, theory and application, and across a range of disciplines (e.g., applied mathematics, computer science, business and economics, and engineering).

The journal covers the spectrum of perspectives, methodologies, and industry applications in the field, and through a variety of article types (including original research articles, case studies, tutorials, surveys, and pre-registration of experiments), encourages innovation and engagement.

SN Operations Research Forum endeavors to be a journal of, for, and by the community. Whether you are an individual, university department, or society, please consider developing a topical collection for publication in SN ORFO. A topical collection can be connected to research proceedings from an upcoming conference or simply a collection of articles centered around an emerging area of research or the scientific legacy of a pioneer in the field.

4 issues a year/along with the facility to have multiple Topical Issues
